Advisory Sl/11/2020

Change of Authentication method for HPSM

You may be aware that HPSM (HP service manager) is the ticketing solution deployed by DG systems, wherein tickets are raised for any reported IT issue/request. This tool is majorly used by vendor team's member and a few departmental officers.

2.0 Currently, to access HPSM, separate username and password has been provided to the user. User has to remember additional password for using HPSM and in case of forgetting password, one has to reach out to Saksham Seva for issue of fresh password.

3.0 In order to obviate the above difficulty, DG Systems has changed HPSM authentication method to SS OID and SSOID Password w.e.f. 20/09/2020. This will eliminate the need of remembering additional password to access HPSM. A "Forgot SS OID/Password" link has also been added on the authentication page, which will redirect users to Swayam portal, where they can perform self-password reset in case they forget their SS OID or SSOID Password. For detail on self-password reset, please refer Advisory no Sl/08/2020 dated 28.07.2020.
